

9. Mental Health Whole System Review: Review the Works

IIA Statement

It is intended to conduct an independent review of The Works, to establish if this is the most cost effective and efficient method of service delivery that will enhance the outcomes for service users, their employability needs and wider recovery.

An Integrated Impact Assessment (IIA) will be conducted following the completion of the review to identify any potential equality, human rights, environmental or economic impacts, as well as any appropriate mitigations. Due consideration will be given to equalities during the course of the review in recognition that this should be an ongoing part of any service review.
