

Integrated Impact Assessment Statement

2026/27 Savings and Recovery Programme

Technology-Enabled Care

This proposal sets out to review the tech enabled care pathway and areas within scope for potential redesign and efficiencies. This will involve designing small tests of changes with specific cohorts of service users to trial different types of technology available. Each test of change will be assessed fully and an evidence base developed for further application.

Scoping of the tests of change is still in progress, and it is therefore not possible to carry out an Integrated Impact Assessment at this time. Once tests of change have been finalised and the cohorts of affected service users identified, full Integrated Impact Assessments will be carried out to ensure that all potential impacts are captured.
